

# DYNELLO® Strap Winder

RS0601

## PRODUCT DESCRIPTION

DYNELLO® Strap Winder is a manual strap winder and is characterised as being both hand-held and portable. The new design is made in two parts; the *crank* and the *handle*. The crank rotates the strap and is made of thick steel to compensate for heavy-forced rotation without breaking. The handle is designed as a single part comprising the shaft to hold the webbing and the strap-steer that guides and steer the webbing during roll-up. The entire construction is made simple and ultra-strong, which ensures a maintenance-free and long-lasting strap winder.

In addition, the innovative two-part design provides improved ergonomics for your wrists during roll-up. The simple design makes it easy to insert the strap and wind it up quickly, without the need for any complicated maneuvers to get started. For storage, the crank has a cut-out so it can be attached to the handle, keeping the two parts together.

Ideal for truck drivers who prefer a simple, long-lasting and effective strap winder.

## TECHNICAL DETAILS

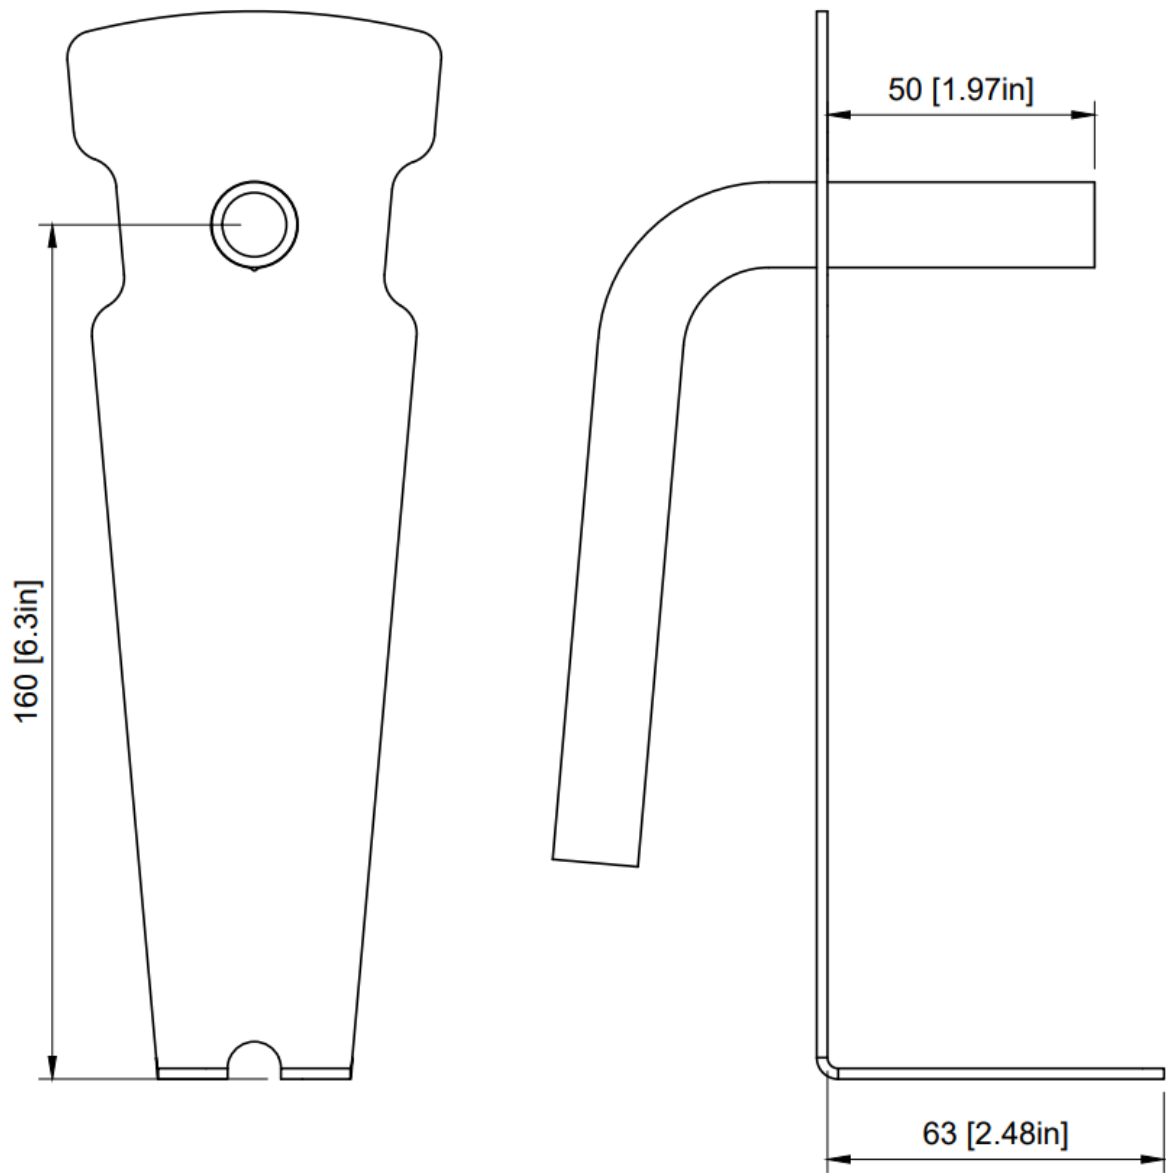

- Suitable for 50 mm (2 in) wide straps, max. length 25 m (82 ft)
- Material: Steel, galvanised
- Packaging: Carton sleeve
- Weight: 480 g
- DYNELLO® Strap Winder is a protected product
